Introduction

SAP Business One Data Transfer Workbench is a migration tool that enables you to transfer data from your legacy system into SAP Business One. This document describes how to install SAP Business One Data Transfer Workbench.

Installing Data Transfer Workbench

Prerequisites

- You have installed the SAP Business One DI API.

Note

If you have installed the SAP Business One client, the DI API is included in the installation, so you do not need to install it separately. In this case, the first time you use Data Transfer Workbench, the client must be open to enable the DI API to load.

To get the DI API online help, you can do one of the following:

- Install the SAP Business One SDK within the optional components of the SAP Business One client. The DI API documentation and samples are available after you install the SAP Business One SDK. For more information, see the SAP Business One *Administrator's Guide*.
- Download the SDK DI API online help from www.sdn.sap.com. From the *SDN Community* home page, choose *SAP Business One* on the left. Under the section *Business One Knowledge Center*, choose your SAP Business One version. From the *SDK Help Center*, click the link to download the zip file.

- You have a local area network connection from your workstation to the SAP Business One server.
- You have an *SAP Addons* license from SAP.
For more information about licensing, see the SAP Business One *License Guide*.
- To install Data Transfer Workbench on a workstation, make sure you have the following minimum hardware and software requirements for the workstation:
 - Processor: Intel® Pentium
 - Memory: 128 MB RAM
 - Display: 24-bit color display
 - Free hard disk: 500 MB available storage space
 - OS: Microsoft® Windows XP; Windows Server 2003; Windows Vista; Windows Server 2008

Procedure

1. Get the Data Transfer Workbench installation package from the SAP Business One product CD or download it from SAP Service Marketplace: <http://service.sap.com>.
2. Run the *setup.exe* file.
3. In the welcome window, choose the *Next* button.
4. In the *Select Destination Folder* window, specify the installation path and choose the *Next* button.
5. In the *Select Program Folder* window, specify the program folder and choose the *Next* button.
6. In the *Review Settings* window, review the settings you have made.
 - To continue, choose the *Next* button.
The Data Transfer Workbench setup process begins.

- To change the settings, choose the *Back* button to return to the previous steps.

7. When the setup process is completed, choose the *Finish* button.

You have installed Data Transfer Workbench.

8. To check the installation, from the Microsoft Windows taskbar, choose *Start* → *All Programs* → *SAP Business One* → *Data Migration*.

The *Data Migration* folder contains three items: *Data Transfer Workbench*, *Documentation*, and *Templates*.

Result

You can now launch Data Transfer Workbench.

To access Data Transfer Workbench, from the Microsoft Windows taskbar, choose *Start* → *All Programs* → *SAP Business One* → *Data Migration* → *Data Transfer Workbench*.

Uninstalling Data Transfer Workbench

To uninstall Data Transfer Workbench, use the Microsoft Windows *Add/Remove Programs* function.

Help from SAP

If you have any problems with Data Transfer Workbench, open a message in the **SBO-DTW** component on SAP Service Marketplace: <http://service.sap.com>.
